

RENCANA AKSI INSAN STATISTIK TELADAN 2024

NOFRIANI Pranata Komputer Ahli Muda BPS Provinsi Bengkulu

IST BERPRESTASI

- 1. Juara I Data Science Hackathon LAN RI 2024
- 2. Juara VI Hackathon Data Regsosek Bappenas 2022
- 3. Juara III Kompetisi Infografis Interaktif BPS 2016
- **4. Employee of The Year** BPS Provinsi Bengkulu 2023
- **5. Terbaik I Training of Trainer** Pusdiklat BPS 2024
- 6. Terbaik II Pelatihan KTI Pusdiklat BPS 2020
- 7. Programmer BPS Provinsi Bengkulu since 2015
- 8. Peserta Terbaik Pelatihan-pelatihan BPS since 2017

IST BERKOMPETENSI

- Penulis Research Paper di bidang Teknologi Informasi, Machine Learning dan Data Mining
 - Penulis Novel Best Fiction, Buku Teknologi Informasi dan Buku Belajar Bahasa Inggris
 - Pembicara di Seminar dan Pelatihan Skala Nasional

IL INTRODUCTION

A country recomment state is reported to its propie in a multimode of ways. Upon heigh expenses for the country and the state of ways. Upon heigh expenses must be accretion systematic procedure, our example of shick in the town. There is the country of the country of the state of the country of the country of the state of the country of the country of the country of the state for these placetimes are recorded in an attention. The data from these placetimes are recorded of man attention of the country of the c

on text imming are now gazining propularity due to the continuously ming unathered or available electronic documents. An extensive amount of research has been perferred on classification problems, and a number of them specific (2011) recently looked as experimental multi-label classification methods to classify phomenes in the Iranii language, which consisted of 45 labels. They utilized the binary refeserance, their power ext, and classifier datum methods using different base classifiers and found that the label power set method with exceptacinal instant optomization as the base

ournal of the ASEAN Committee on Science and Technology

Another study by Irana and Khodra (2019) employed overall potential methods to improve hierarchical institlabel classifiers for Indonesian news articles, namely using a consociational neural network, classifiant parage wond vectors from a distributed semantic model, and cembining lessifial as well as semantic methods to extract document fessifial as well as semantic methods to extract document paragraphic production of the contract of the contract paragraphic production of the contract paragraphic production of the contract An adaptive classification and clustering algorithm was the contract of the contract and the contract of the contract paragraphic production paragraphic production paragraphic production paragraphic production paragraphic production paragraphic production paragraphic paragraphic paragraphic paragraphic production paragraphic production paragraphic paragrap

An adaptive classification and clustering algorithm is also implemented in the most recent research by Hiset al. (2019) to present effective Twister data streaming, ing pre-processed data utilizing improved fuzzy C-mea. The method effectively clusters. Twister information suladaptive particle swarm optimization. The research vealed that the technique can process data streaming b

extreme by Prajipati and Thakkar (2019), using over ter theusand labels. The large-scale classification used by data from the internet, namely Wilkopelia, Amazon, and so cial networks. Their study was a survey paper that manage to review the ongoing challenges and possible approache on extreme multi-label classification problems. As these works show, quite a number of studies have

been carried out on multi-label classification problems with a very large number of categories (labels). However, very few have been done using data on economic phenomena. The present study focused on such missing areas, aim-
